os.makedirs('requests', exist_ok=True)
```

Below is how we query the api and get the results split into the first 10 results and the next 90 results

```
In [ ]: # for state in united_states:
#       q = f'{state}%20storm%20article'
#       url = f"https://api.apilayer.com/google_search?q={q}"

#       payload = {}
#       headers= {
#         "apikey": os.getenv('google'),
#       }

#       response = requests.request("GET", url, headers=headers, data = payload)

#       status_code = response.status_code
#       result = response.text
# requests folder holds the json files for the first page of results for each state
#       with open(f'requests/{state}.json', 'w') as f:
#           f.write(response.text)
#       print(f'{state} status code: {status_code}')
```

```
In [ ]: # for state in united_states:
#       for i in range(10):

#           q = f'{state}%20storm%20article'
#           url = f"https://api.apilayer.com/google_search?q={q}&start={11+i}"

#           payload = {}
#           headers= {
#             "apikey": os.getenv('google'),
#           }

#           response = requests.request("GET", url, headers=headers, data = payload)

#           status_code = response.status_code
#           result = response.text
#           name = f'{state}_{i}'
# more_requests folder holds the json files for pages 2-10 of results for each state
#           with open(f'more_requests/{name}.json', 'w') as f:
#               f.write(response.text)
#           print(f'{state}_{i} status code: {status_code}')
```

below gets the urls found in the requests and stores them in a list organized by State

```
In [ ]: import json
# urls
urls = {}

# step through the json files and get the urls for the articles
for file in os.listdir('./requests/'):
    with open(f'./requests/{file}') as f:
        urls[file[:-5]] = []
        data = json.load(f)
        for item in data['organic']:
            url = item['link']
            urls[file[:-5]].append(url)

urls
```
